Because this function is not continuous in P_0 we have to exclude this point from V . Therefore a small sphere with surface S and radius around P_0 is excluded from the volume V . Green's theorem is now applied in the volume V_0 lying between S and $S_0 = S + S$. It is clear that G , being a spherical wave, also obeys a Helmholtz equation

Fourier optics Wikipedia

Fourier optics is the study of classical optics using Fourier transforms (FTs), in which the waveform being considered is regarded as made up of a combination, or superposition, of plane waves. It has some parallels to the Huygens-Fresnel principle, in which the wavefront is regarded as being made up of a combination of spherical wavefronts whose sum is the wavefront being studied.
