Gentianaceae an overview ScienceDirect Topics

Crop time is increased in winter and can be reduced with supplementary irradiation. Plants were too compact and brittle when grown under 16 hours of fluorescent light at 345 mol m² s⁻¹ while 183 mol m² s⁻¹ of light produced high quality plants (Holcomb and Craig, 1983). Some light reduction has been suggested in the summer.

Gentianaceae Article about Gentianaceae by The Free

a family of dicotyledonous plants. Gentianaceae are primarily herbs with opposite (sometimes verticillate) entire leaves. The flowers, most commonly gathered into clusters, are usually large and brightly colored, bisexual, regular, and tetramerous or pentamerous (or, rarely, with six to 12 members); the gynoecium is dimerous with a superior ovary.
