Tropical Ecosystems and Ecological Concepts Second

This introductory textbook covers the entire range of tropical ecosystems - terrestrial, freshwater and marine - and uses each system to illustrate and explain major ecological concepts, including primary and secondary production, population dynamics and community ecology.

Tropical Ecosystems and Ecological Concepts by Patrick L

It is unique in its balanced coverage of both aquatic and terrestrial systems and in its international scope. Each chapter is built around a particular tropical ecosystem, with descriptive case studies providing a framework around which ecological concepts and applied ecological topics are presented.

Tropical habitats cover over one third of the Earth's terrestrial surface and harbor much of its biodiversity, with many areas rich in endemic species. However, these ecosystems are under significant and growing threat from issues such as deforestation, land degradation and ocean acidification. This introductory textbook provides a comprehensive guide to the major tropical biomes.

Tropical Ecosystems Ecosystems and Biomes

Tropical equatorial rainforests have a distinct climate. They are hot and wet all year round, this is because of their location near the equator which means that the sun is overhead all year round. Rainfall is high, around 200mm per year, it rains everyday because the high temperature creates convectional rainfall.

The future of hyperdiverse tropical ecosystems Nature

Abstract. The tropics contain the overwhelming majority of Earth's biodiversity: their terrestrial, freshwater and marine ecosystems hold more than three-quarters of all species, including almost all shallow-water corals and over 90% of terrestrial birds. However, tropical ecosystems are also subject to pervasive and interacting stressors,

Environmental Problems Caused by Deforestation of Tropical

Many of the world's old-growth forests are disappearing. One of the most important deforestation problems is that the loss of the arboreal carbon sink increases the concentration of carbon dioxide in the atmosphere. This contributes to global warming, mass extinction and other ecological issues.

Ecosystem Wikipedia

An ecosystem is a community of living organisms in conjunction with the nonliving components of their environment, interacting as a system. These biotic and abiotic components are linked together through nutrient cycles and energy flows. Energy enters the system through photosynthesis and is incorporated into plant tissue. By feeding on plants and on one-another, animals play an important role

Tropical ecology is the study of the relationships between the biotic and abiotic components of the tropics, or the area of the Earth that lies between the Tropic of Cancer and the Tropic of Capricorn (23.4378 N and 23.4378 S, respectively). The tropical climate experiences hot, humid weather and rainfall year-round.
